ABOUT THE PROGRAM

At Regex Software, we offer a comprehensive 18–24 Month Data Science & AI Specialization Program designed especially for B.Tech, BCA, B.Sc, BBA, B.Com and other college students who want to build a strong career in the tech industry.

This program is ideal for 1st and 2nd year students who want to start learning future technologies early and gain a competitive edge in the industry. The course is designed to build strong fundamentals first and then gradually move toward advanced concepts in Artificial Intelligence, Machine Learning, Big Data, and Data Analytics.

At Regex Software, we believe in practical learning rather than only theoretical knowledge. Our training approach combines conceptual understanding with hands-on implementation through real-world projects, live datasets, industry case studies, and portfolio-building assignments. Throughout the 18–24 month journey, students continuously work on practical tasks that help them understand how technologies are used in real companies and business environments.

The curriculum covers Python programming along with advanced libraries such as NumPy, Pandas, and Matplotlib, helping students build a strong foundation in programming and data handling. Students also learn Statistics, Data Analysis, SQL, Database Management, Machine Learning, Deep Learning, Big Data technologies like Hadoop and Spark, Data Visualization, Cloud fundamentals, and MLOps basics. The entire learning path is designed according to current industry requirements so students become job-ready with practical industry skills.
